- SQL queries for the system's high-load components were optimized, which cut database expenditures by 20%

## EDUCATION

**University Of Mazandaran** Babolsar, Mazandaran
*Bachelor of Software Engineering* *2010 – 2013*

- the main project was about watchman route problem that is about the smallest routing path a watchman should go to see all the space on the room , the accuracy of my program was about 98% in different scenarios – the code is available on my github : https://github.com/sajjadabd
